

### Ruby on Rails - Senior Developer Wanted

Bionic Giant is seeking a senior Ruby on Rails developer for a wide variety of projects as part of our special ops team in the Minneapolis/St. Paul office. Bring your skills and passion, and together we will mutually reach new heights. Candidates must be local.

#### About You

You have crazy coding skills, and you're not afraid to use them. Your teammates can count on you to follow a project through and continually inspire them to a higher state of performance. You know how to problem solve and deliver the best to the client. You love a challenge, have great attention to detail, and excel in time management.

#### About Us

Bionic Giant is a creative agency located in Minneapolis and Denver. As we continue to grow our technology offering we are in need of another senior level Ruby on Rails developer. We have a great mix of existing projects we've maintained for years and brand new apps we're building from scratch. A day in the life of a Bionic Giant may include focusing hard on getting a new project out the door, or popping in and out of several codebases to fix small bugs. Our developers are autonomous and flexible—but not lone rangers. Our developers must be excellent communicators, as there are times we count on you to provide insight to clients and colleagues alike. We encourage curiosity at every level, trusting you to ask as many questions as necessary to deliver great work. We will not put you in a boat, toss you an oar, and say "good luck!" We work together as a team to review each other's work, provide feedback, and help each other get better at the craft of software development. We all succeed together. Individually speaking, if you decide you want to explore a new technology or attend a conference, we will do everything we can to support you.

We also expect you to take time off. Developing software is tough, and as far as Rails development goes, we get you spend a fair amount of time slamming your head against a keyboard battling complex issues. Taking time off to recharge with your family and/or friends (or just taking a half day here and there to go on a hike or hit up a brewery) is highly encouraged.

#### The primary job role of a Ruby on Rails Developer is to:

- Write clean, efficient and maintainable code
- Contribute to all phases of the software development lifecycle
- Design robust, secure and scalable features
- Lay the best foundation for building apps on the latest Ruby on Rails technologies

### Ruby on Rails Senior Developer Job Description

Wanted: Ruby on Rails Senior Developer for writing clean, efficient, and maintainable code. Our goal is to match your exceptional programming skills with our dedicated Rails team to develop a high-quality software platform and support it throughout its lifecycle. If you like to work in a fun environment and have a passion for programming, we would love to hear from you.

### Requirements

- BS/MS degree in Computer Science or Information Technology, or other related field, preferably in software development as a Ruby on Rails Developer
- 5+ years of work experience as a Ruby on Rails Developer
- ROR certifications will be an added benefit
- Familiar with Mocking, MVC and ORM
- Understanding of database patterns and architecture
- Knowledge of code deployment and version control
- Experience of working with relational as well as NoSQL databases
- Experience of front-end technologies (e.g. JavaScript, CSS, HTML, and JQuery)
- Ability to develop highly interactive as well as user-friendly applications
- Sound knowledge of object-oriented design and analysis
- A strong passion for writing simple, clean and efficient code
- An analytical mind in addition to a problem-solving attitude
- Ability to make quick decisions while working independently
- Genuinely like people and enjoy a team environment
- Good personal time management skills
- Excellent communication skills
- Solid understanding of architecting an app the "Rails Way"
- Creating and documenting APIs for use by mobile apps
- Committing code to using Git
- Test-driven development and writing tests with RSpec
- Integrating with third party API's
- Postgres and/or MySQL databases
- Integrating with front-end frameworks like React and Vue

### Responsibilities

- Writing clean, efficient and maintainable code
- Contributing to all phases of the software development lifecycle
- Designing robust, secure and scalable features
- Driving continuous integration of relevant new technologies and upgrades into design
- Following the best-established practices such as test-driven development, SCRUM, continuous integration, refactoring and code standards
- Architect and install new infrastructure
- Design and build reusable and efficient Rails code
- Plan and implement new features
- Integrate data sources and databases in one system
- Identify the bugs and propose the solution for problems

- Interact with stakeholders to express and present platform proficiency according to their practices
- Collaborate with Graphic Designers and UI Designers to understand the product requirements better
- Design and develop new software applications from scratch
- Maintain and manage APIs
- Test the Rails code for bugs and resolve them accordingly
- Stay updated about latest developments in Rails programming
